

Enterprise Capability Statement

Technical Prospectus & Platform Specifications · 2026 Edition

Registered Office: 5A 45/46, Cloud-9, Sector-1, Vaishali, Ghaziabad, UP 201019, India

Consortium Partner: TRIAXIS Industrial Power & HVAC Advisory Bench

Official Web & SLA: <https://www.prishitech.com> · 24/7 OT Priority Response SLA

1. Executive Overview

Prishitech Solutions unifies industrial energy, water, gas, and chiller management into a single resource intelligence platform. Supported by comprehensive end-to-end IT services, cloud infrastructure, and cybersecurity expertise as a TRIAXIS Consortium partner, we eliminate multi-vendor friction by offering a single accountable architecture from physical sensor telemetry to enterprise cloud intelligence.

2. Unified Resource Intelligence Platform

• Energy Management & Sub-Metering:

High-frequency feeder monitoring, automated peak-load alerts, baseline benchmarking against historical targets, power-factor penalties prevention, and BEE (Bureau of Energy Efficiency) compliance reporting.

• Continuous Water Tracking & Acoustic Leak Detection:

Source-to-tap flow telemetry across borehole, municipal, and recycled lines. Automated mass-balance leak detection algorithms that flag distribution losses within minutes.

• Industrial Gas & Pressure Monitoring:

Live telemetry across LPG, PNG, and industrial gases. Real-time differential pressure tracking with safety threshold alarms and predictive refill scheduling.

• Chiller Plant & HVAC Optimization (COP Telemetry):

Thermodynamic efficiency tracking (Coefficient of Performance), chilled-water flow monitoring, automated condenser fouling warnings, and vibration/thermal health indexing.

• Certified Energy Advisory & Statutory Audits:

Accredited energy audits complying with Energy Conservation Act regulations, ISO 50001 management systems, and payback ROI modeling for high-efficiency retrofits.

3. IT Services & Digital Transformation Portfolio

- **IoT & Operational Remote Monitoring:**
Multi-protocol gateway deployment (Modbus RTU/TCP, BACnet, MQTT, LoRaWAN, OPC-UA). Edge buffering guarantees zero data loss during network disruptions.
- **Hybrid Cloud & Industrial Infrastructure:**
Enterprise architectures deployed on AWS, Azure, GCP, or on-premise private clouds. Built with Docker, Kubernetes, and automated disaster recovery.
- **Cybersecurity & OT / ICS Defense (IEC 62443):**
Purdue Enterprise Reference Architecture (PERA) network segmentation. DMZ isolation, role-based access control (RBAC), and continuous SCADA vulnerability assessments.
- **Big Data, Stream Processing & Operational Analytics:**
High-throughput time-series data pipelines, anomaly detection models, and custom C-suite dashboards aggregating multi-site facility performance.

4. The TRIAXIS Consortium Delivery Advantage

• **AI & Autonomous Process Optimization:**
Traditional facility modernization fails because IT software vendors lack electrical power engineering depth, while hardware contractors lack modern cloud and cybersecurity capabilities. The TRIAXIS Consortium bridges this divide. Prishitech's software intelligence bench works alongside certified electrical, HVAC, and energy auditing engineers to guarantee measurable reductions in kilowatt-hours, cubic meters, and operating costs under a single unified SLA.

Key Enterprise Performance Benchmarks

- Average Energy Cost Reduction: 12% to 22% within first 90 days
- Water Leak Detection Response: Identified within 15 minutes of occurrence
- Chiller COP Improvement: 8% to 15% improvement via predictive optimization
- Compliance Certification: 100% statutory adherence to BEE & CEA mandates
- Typical Payback Period: 4 to 9 months on capital hardware deployment

Initiate an Architecture Consultation

Our enterprise solutions architects are available for on-site facility walkthroughs and live telemetry demonstrations.
