

ENTERPRISE CAPABILITY STATEMENT | 2026 TECHNICAL PROSPECTUS

Industrial Resource Intelligence & Digital Infrastructure

Unified Utility Telemetry, Operational Cybersecurity & TRIAXIS Consortium Architecture

ISSUED TO / CLIENT	Enterprise Partner - Industrial Facility	DOCUMENT REF	PTS-CAP-2026/V3
REGISTERED HUB	5A 45/46, Cloud-9, Sector-1, Vaishali, Ghaziabad, UP 201019	CLASSIFICATION	Commercial Briefing

1. Executive Overview & Strategic Mission

Prishitech Solutions delivers mission-critical resource intelligence and industrial digital transformation architectures for manufacturing plants, commercial infrastructure, and utility-intensive enterprises. Operating in unified alliance with the TRIAXIS Consortium - integrating certified energy auditors, chartered electrical consultants, and HVAC thermodynamic specialists - we bridge the structural divide between shop-floor physical telemetry (OT) and enterprise cloud analytics (IT).

Our vendor-agnostic architecture is designed to support statutory compliance with Bureau of Energy Efficiency (BEE) mandates, verifiable utility conservation, and rapid capital payback under a unified SLA.

2. Unified Resource Intelligence Platform - Core Practice Pillars

01 Energy Management & High-Precision Sub-Metering

BEE & POWER QUALITY

High-frequency feeder monitoring capturing active/reactive power, harmonics (THD), and voltage unbalance. Real-time power factor optimization eliminates DISCOM penalties, while automated peak-demand curtailment and baseline regression ensure compliance with Energy Conservation Act regulations.

02 Continuous Water Telemetry & Acoustic Leak Diagnostics

MASS-BALANCE & WATER

Source-to-tap flow instrumentation spanning borehole abstraction, municipal intake, and recycled lines. Automated mass-balance divergence algorithms and acoustic sensors isolate distribution losses and pipe ruptures within 15 minutes, preventing Non-Revenue Water (NRW) loss.

03 Industrial Gas, Steam & Pressure Optimization

DIFFERENTIAL PRESSURE

Real-time telemetry across LPG, PNG, and specialty industrial gases. Differential pressure transmitters trigger predictive refill notifications, eliminate safety over-pressurization risks, and calculate thermal steam-loss gradients across header distribution mains.

04 Chiller Plant & HVAC Thermodynamic Performance (COP Telemetry)

THERMODYNAMIC COP

Continuous Coefficient of Performance (COP) logging, chilled-water delta-T analytics, and condenser approach temperature diagnostics. Automated vibration and thermal health indexing protects centrifugal and screw chillers from catastrophic downtime.

05 Accredited Energy Advisory & Statutory Compliance Audits

ISO 50001 & AUDITS

Certified Bureau of Energy Efficiency (BEE) audits, investment-grade techno-commercial feasibility studies, and ISO 50001 EnPI development. We deliver verified payback models that de-risk capital retrofits for variable-frequency drives (VFDs) and high-efficiency compressors.

STATUTORY STANDARDS, CERTIFICATIONS & COMPLIANCE BENCHMARKS

BEE & ECA 2001 Statutory Compliance

Accredited Energy Audits under Energy Conservation Act regulations. Automated generation of Form-1 and Form-2 compliance documentation, specific energy consumption (SEC) benchmarking, and Perform, Achieve and Trade (PAT) scheme verification.

ISO 50001:2018 Energy Management Systems

Built-in multivariable linear regression for Energy Baselines (EnB) and Energy Performance Indicators (EnPIs). Continuous telemetry provides tamper-evident audit trails for external certification bodies.

Central Ground Water Authority (CGWA) Mandates

Statutory borehole abstraction telemetry, digital flowmeter calibration records, and automated piezometric depth recording with secure cloud retention.

IEC 62443 Industrial Cybersecurity & 24/7 OT Operations SLA

Purdue model network segregation with DMZ isolation. Consortium-backed rapid technical dispatch with 24/7 remote supervisory telemetry targeting 99.95% system uptime.

3. IT Services & Industrial Digital Transformation Practice

01 Edge Telemetry & Industrial IoT Gateway Engineering

EDGE PROTOCOLS

Turnkey deployment of ruggedized multi-protocol edge gateways supporting Modbus RTU/TCP, BACnet IP, MQTT, LoRaWAN, and OPC-UA. Hardware optical isolation and non-volatile ring-buffering are designed to prevent telemetry loss during plant network disruptions.

02 Hybrid Industrial Cloud & Resilient Infrastructure

CLOUD & K8S

High-availability architectures deployed across AWS, Azure, GCP, or sovereign on-premise industrial private clouds. Containerized with Docker and Kubernetes, featuring automated disaster recovery and sub-second failover protocols.

03 Operational Technology (OT) & ICS Defense (IEC 62443 Aligned)

PERA / OT DEFENSE

Rigorous Purdue Enterprise Reference Architecture (PERA) network segmentation. Air-gapped demilitarized zone (DMZ) isolation, role-based access control (RBAC), and continuous vulnerability assessments protect SCADA and PLC control networks.

04 Time-Series Big Data & Operational Intelligence

STREAM ANALYTICS

Distributed stream-processing pipelines ingesting millions of telemetry data points per day. Machine learning algorithms benchmark asset wear, detect anomalous consumption surges, and deliver real-time C-suite executive performance dashboards.

05 Autonomous Closed-Loop Process Optimization

CLOSED-LOOP AI

Supervised and reinforcement learning models that forecast peak-tariff intervals, optimize central chiller staging, and trigger autonomous demand-response load-shedding relays without human latency.

4. The TRIAXIS Consortium Delivery Advantage

Facility modernization programs commonly suffer from a fundamental industry divide: enterprise software vendors lack electrical power engineering and thermodynamic depth, while traditional HVAC and electrical contractors lack modern cloud infrastructure and OT cybersecurity capabilities.

The TRIAXIS Consortium addresses this friction. Prishitech's software intelligence bench operates alongside certified energy auditing engineers, chartered electrical consultants, and HVAC thermodynamic specialists. Enterprise clients receive a single accountable contract, unified service-level agreements, and utility-expenditure reduction targets.

5. Key Enterprise Performance Benchmarks

METRIC / AUDIT TARGET	INDUSTRIAL BENCHMARK	AUDIT METHODOLOGY
Average Electrical Energy Reduction	12% to 22% Net Cost Reduction	Feeder baseline regression in first 90 days
Distribution Water Leak Response	Identified & Flagged in < 15 Minutes	Automated mass-balance acoustic sensors
Central Chiller COP Improvement	+8% to +15% Thermodynamic COP Gain	Continuous delta-T & kW/TR telemetry
Statutory BEE & Energy Compliance	Target: Full Adherence to BEE & CEA Mandates	Form-1/2 audited filings & ISO 50001 logs
Capital Deployment Payback Period	4 to 9 Months Payback Target	Net utility savings & penalty elimination

Initiate an Architecture Consultation & Facility Walkthrough

Our senior solutions architects and consortium partners are available for on-site facility audits and live telemetry demonstrations.
